Derrick Brooks

Founder & CEO, Xandu Limited, LLC

Every business is a target. Almost none can afford protection.

\$200K–\$400K

Annual cost of a full-time CISO — out of reach for a small business

~47%

of businesses under 50 employees have no cybersecurity budget at all

43%

of all cyberattacks target small businesses — and the rate is rising

Too big to ignore security. Too small to afford it. And now their insurers, customers, and regulators require a real security program anyway.

The pressure just became unavoidable.

Demand is no longer about whether SMBs care about security — it is being forced on them.

1 Cyber-insurance as gatekeeper

Insurers now require proof of controls (MFA, IR plans) to issue or renew — and 63% of SMBs saw premiums jump 200%+ in 2025.

2 Customer-driven requirements

Large customers push security questionnaires down to their small vendors. No program, no contract.

3 Expanding regulation

HIPAA, CMMC, the FTC Safeguards Rule, and state privacy laws now carry real penalties deep into the SMB tier.

4 AI makes it deliverable

Only now is AI capable enough to deliver expert-level security guidance at a price the small-business segment can afford.

ShieldAI: a virtual CISO, powered by AI, overseen by engineers.

• LIVE IN PRODUCTION

Already built and running in production today.

A continuous program

Not a one-time PDF that dies in a drawer — a living security program that stays current.

A real, defensible score

Deterministic NIST-based posture score that insurers and auditors can actually trust.

The full deliverable set

Ready-to-use policies, prioritized roadmap, training, and compliance tracking.

Subscription pricing

Priced like software, not a consulting engagement — affordable for real SMB budgets.

Assess → Score → Generate → Manage

A real engineering pipeline — not a chatbot guessing.

The deterministic scoring engine is the core IP — explainable and repeatable where an opaque AI number would never be trusted.

• LIVE DEMO

See it work.

Client experience

Home → assessment → live posture score → deliverables → generated policy

The platform

Analyst command center → per-client dashboard → Mastermind AI co-pilot

Land with self-serve. Expand to managed programs.

LAND

Self-Serve

Low-cost assessment gets businesses in the door and proves value immediately.

EXPAND

Managed vCISO

Clients graduate to engineer-run programs — recurring, higher-value, sticky.

SCALE

The Platform

Each engineer + AI console runs many clients. Revenue grows faster than headcount.

This isn't one product — it's a growth engine with expansion built in.

Recurring revenue that grows with the relationship.

Self-Serve

\$129/mo

Automated assessment, NIST score, full program, policy generation

Guided

\$599/mo

Adds periodic engineer review, compliance tracking, and check-ins

Managed vCISO

\$1,950/mo

A ShieldAI engineer runs the program end-to-end — below human-only rates

~75% gross margin at the managed tier. AI does the heavy lifting; engineers add the high-value judgment. Land-and-expand: clients enter at \$129 and grow into managed plans as trust and compliance demands build.

A large, underserved market being forced to act.

TAM

Global vCISO category — ~\$2B+ today, growing 12–15%+ annually

SAM

~600K–1.2M U.S. regulated / insured / supply-chain SMBs

SOM

1% capture ≈ \$20M+ ARR over a 3–5 year horizon

Even a fraction of one percent of the serviceable market is a substantial business. Sources: SBA (2025), composite vCISO research.

Not a wrapper. A defensible system.

Proprietary scoring methodology

Explainable, repeatable, trusted by insurers and auditors — not an opaque AI guess.

Human-in-the-loop

Expert review makes output trustworthy enough to sell — and materially limits liability.

Compounding data + relationships

Every assessment and managed client makes the system smarter and stickier.

The AI is the commodity. The system around it — methodology, workflow, engineers, data — is the moat. A funded competitor can't trivially copy the whole thing.

Built by someone who has done this — at every level.

Derrick Brooks

Founder & CEO

Former U.S. Navy
Lieutenant Commander

- **20+ years in cybersecurity, risk & compliance**
- NSA Red Team division officer · Booz Allen / U.S. Navy SPAWAR · Pacific Fleet Intelligence
- CISO who built full security programs for SMBs — SOC 2, CMMC, ISO 27001, NIST; cut attack surface 80% with zero breaches
- Hands-on today: pen-tested 13 Kia apps, found & remediated 10,000+ vulnerabilities
- **Personally designed and built the live ShieldAI platform**

Credentials CISSP · CISM · Security+ · CC (ISC²)

Education Doctorate in Cybersecurity, Westcliff (in progress) · MBA, IT Management, SNHU (2026) · Double M.S. Cybersecurity, National University

What this raise unlocks.

NOW — Live

Assessment, scoring, programs, policies, multi-model AI, analyst console, Mastermind, monitoring agents — in production.

THIS RAISE

Staff & scale the managed platform: onboard first engineers and paying clients; harden for scale; pursue SOC 2.

THEN

Expand agent telemetry, automated monitoring, and channel partnerships (insurers, MSPs) for low-CAC growth.

Use of \$900K

● Engineering 36%

● First engineers 31%

● Go-to-market 20%

● Ops / SOC 2 / legal 10%

● Reserve 3%

We're raising

\$900,000 seed

To turn a live, working product into a fully staffed managed-security platform — reaching a ~\$3M ARR run-rate and Series A readiness in ~18 months.

“A full-time CISO costs a quarter-million dollars a year. ShieldAI delivers that protection for the price of a subscription — and lets a handful of our engineers protect thousands of businesses.”
