

ShieldAI

The virtual CISO every small business can finally afford.

THE PROBLEM

Every business is a target. Almost none can afford protection.

\$200K–\$400K

Annual cost of a full-time CISO

47%

of firms under 50 employees have no security budget at all

StrongDM / CrowdStrike, 2025

1

The impossible math

99% of US businesses are small/mid-sized — the CISO price tag is out of reach

2

No safety net

Half have no security program; a third rely on free consumer-grade tools

3

The pressure is external

Insurers, customers, and regulators now require a real program — refusing isn't an option

The pressure just became unavoidable.

Insurance as gatekeeper

Proof of controls now required to issue or renew. 63% of SMBs saw premiums jump 200%+ in 2025.

Requirements flow downhill

Big customers push security questionnaires onto their small vendors — no program, no contract.

Regulation is expanding

HIPAA, CMMC, FTC Safeguards, and state privacy laws now reach deep into the SMB tier.

AI makes it deliverable

Only now is AI capable enough to deliver expert-level guidance at an SMB price.

THE SOLUTION

A virtual CISO, powered by AI, overseen by engineers.

● LIVE IN PRODUCTION

THE OLD WAY

A one-time consultant PDF

- Static report that ages the day it ships
- Costs a small business a fortune
- No ongoing monitoring or accountability
- Opaque — no defensible score

SHIELD AI

A living, managed program

- ✓ Continuous program, not a drawer PDF
- ✓ Real, defensible NIST score (CIS alternate)
- ✓ Policies, roadmap, training, live CVE/breach intel
- ✓ Subscription price — not a consulting bill

HOW IT WORKS

Assess → Score → Generate → Manage

01

Assess

Conversational intake +
structured NIST/CIS checklist

02

Score

Deterministic engine — same
inputs, same score, every
point traceable

03

Generate

Policies, roadmap, training,
threat intel, executive report

04

Manage

Continuous monitoring +
expert review via the live
analyst console

The deterministic scoring engine is our core IP — not an AI guess. This slide tees up the live demo.

LIVE DEMO

See it work.

Client view home → Meridian → posture score → deliverables → policy → CVE exposure

Platform view command center → client dashboard → Mastermind → training + compliance

Time-limited access codes available for investor hands-on evaluation.

Land with self-serve. Expand to managed programs.

LAND

Free assessment + low-cost self-serve gets businesses in the door and proves value

EXPAND

Clients graduate to managed vCISO plans — recurring, higher value, higher retention

SCALE

Each engineer runs ~25 clients through the read-only AI console

Not one product — a growth engine with expansion built in.

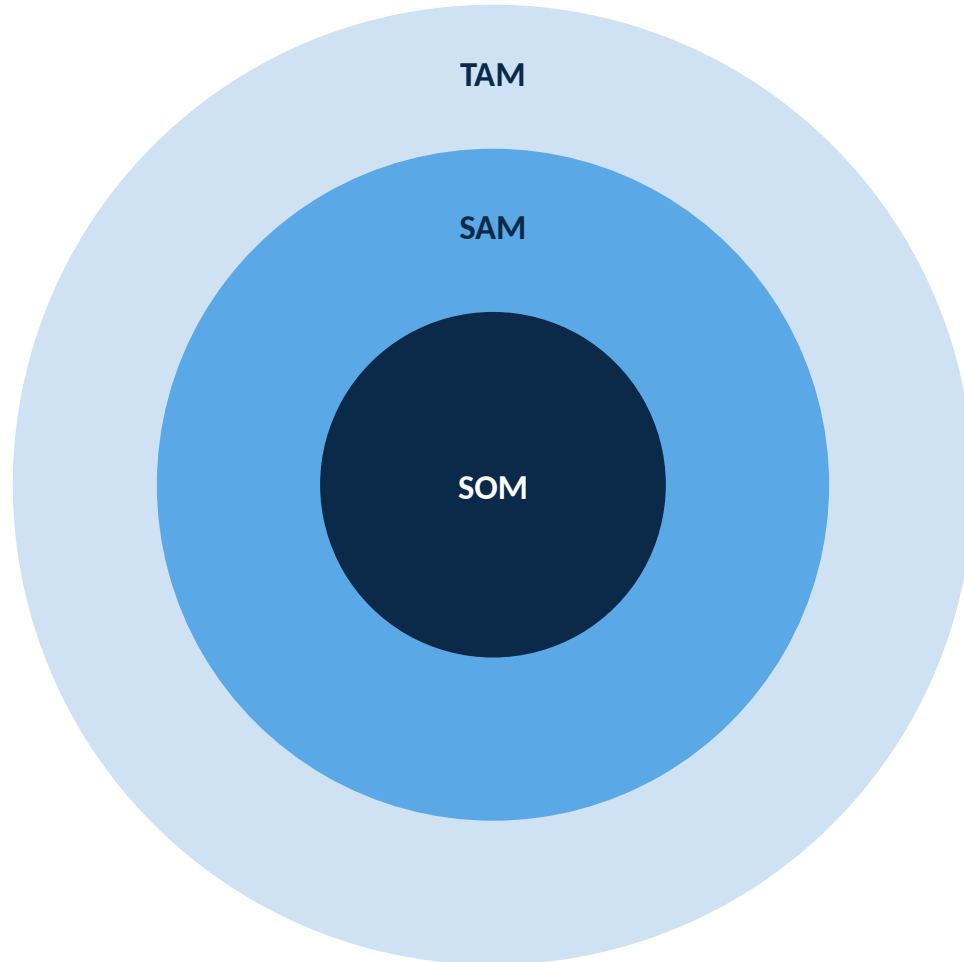

Recurring revenue that grows with the relationship.

Free	Starter	Growth	Guided	Managed
\$0	\$159	\$349	\$699	\$1,950
/mo	/mo	/mo	/mo	/mo
Assessment + score	Full self-serve program	+ threat intel + training	+ engineer review	Engineer runs it all

→ Land-and-expand up the ladder

\$0.28	~25	~75% / ~60%
AI cost / client / mo (measured)	managed clients per engineer	managed / blended gross margin

A large, underserved market being forced to act.

TAM

Global vCISO category ~\$2B+, growing 12–15%+ / year

SAM

Regulated / insured / supply-chain SMBs — ~600K–1.2M businesses

SOM

1% of a 600K SAM ≈ \$20M+ ARR over a 3–5 year horizon

36.2M US small businesses • ~5.8M with employees (SBA, 2025)

Not a wrapper. A defensible system.

Proprietary scoring

Explainable, repeatable, trusted by insurers and auditors — not an opaque AI number

Human-in-the-loop

Expert review makes output trustworthy enough to sell — and limits liability

Real, verifiable data

Live CVE + breach intel and control-mapped frameworks — survives diligence

Uncontested lane

Cynomi is MSP-facing and won't price under \$1,500 — direct-to-SMB is open

The AI is the commodity; the system around it is the moat.

What this raise unlocks.

THE ASK

We're raising

\$900,000 seed

to scale a live platform into a managed-security business.

Series A ready

~Month 18

ARR run-rate

~\$3M

First engineer cohort

running managed books

“A full-time CISO costs a quarter-million a year. ShieldAI delivers that protection for the price of a subscription — it's live today, and it lets a handful of our engineers protect thousands of businesses.”
